Reason for Allowance

The prior art reference of records (US. 5,982,208) shows a clock multiplication circuit for delivering an output clock signal at a frequency that is a multiple of the frequency of a reference clock signal as inputted comprising: a counter, a subtracter, a control voltage generation circuit, and a voltage control oscillator circuit. Reference (US. 5,982,208) fails to show a control voltage generation circuit delivering an analog control voltage corresponding to an integrated value of the difference value obtained by adding a new difference value to the stored integrated value as called for in claims 1, 3, 5 and 23; a counter counting each rising edge at which the output clock signal transmits from a Low level to a High level and each falling edge at which the output clock signal transmits from the High level to the Low level as the effective transition edges of the output clock signal as called for in claim 6; a multiplier for multiplying the difference value by a predetermined factor and delivering a multiplied difference value to the control voltage generation circuit is interposed between the subtracter and the control voltage generation circuit as called for in claim 7; a subtracter capable of switching the subtracter reference value as called for in claim 11. Therefore, claims 1, 3, 5-12 and 23 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
